# LOW CAPACITY OIL BURNERS

AZ 2.9, the smallest of the range, was purposely conceived for low capacities. It is however a "great" burner technologically in the van for its good quality features. AZ 2.9 PR, conceived for special applications is equipped with oil pre-heater.

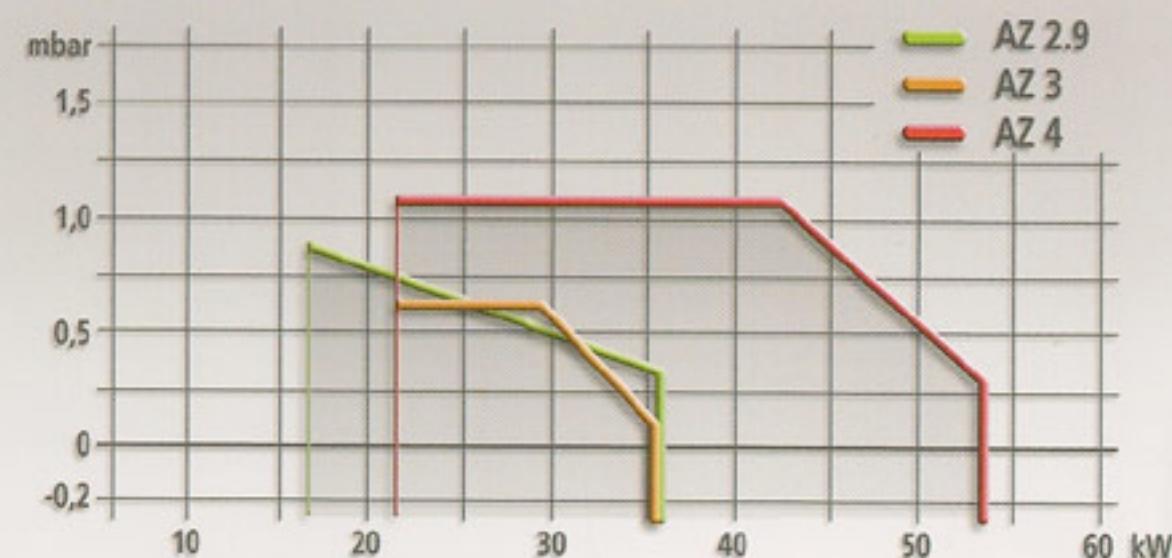

A complete line of high technological level originates from these small great burners which cover a range of capacities from 14,2 to 237,2 kW.

## BURNERS WITH PRE-HEATER

## SINGLE STAGE BURNERS

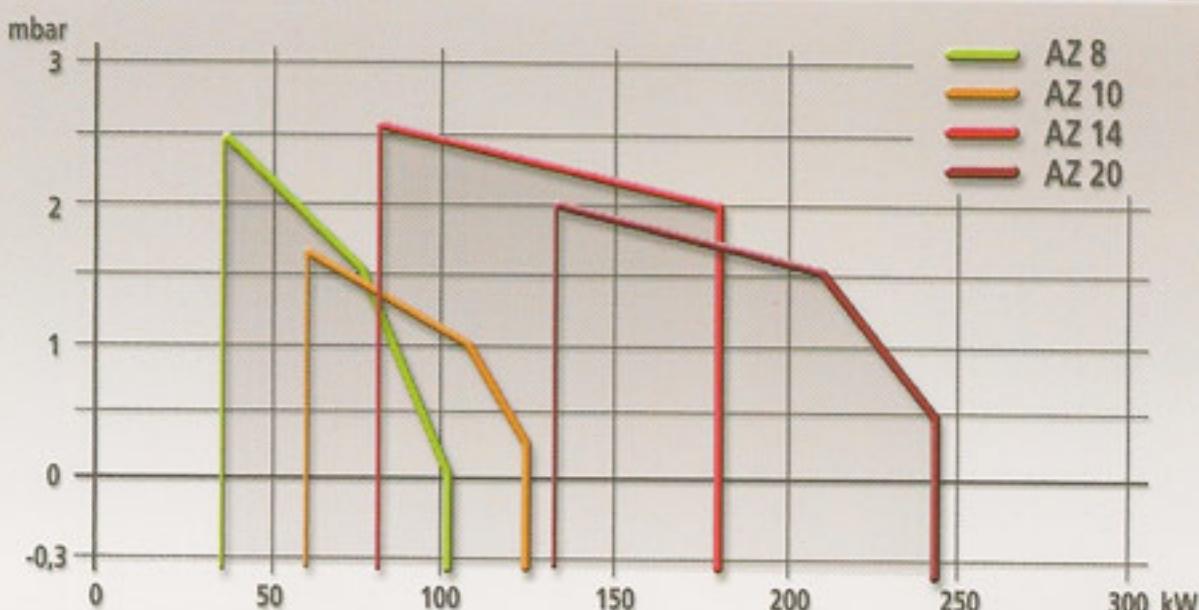

The above graph is the tested performance of the burners according to national and international standards.

The max effective output of the burner is in relation to the heat generators furnace counterpressure.

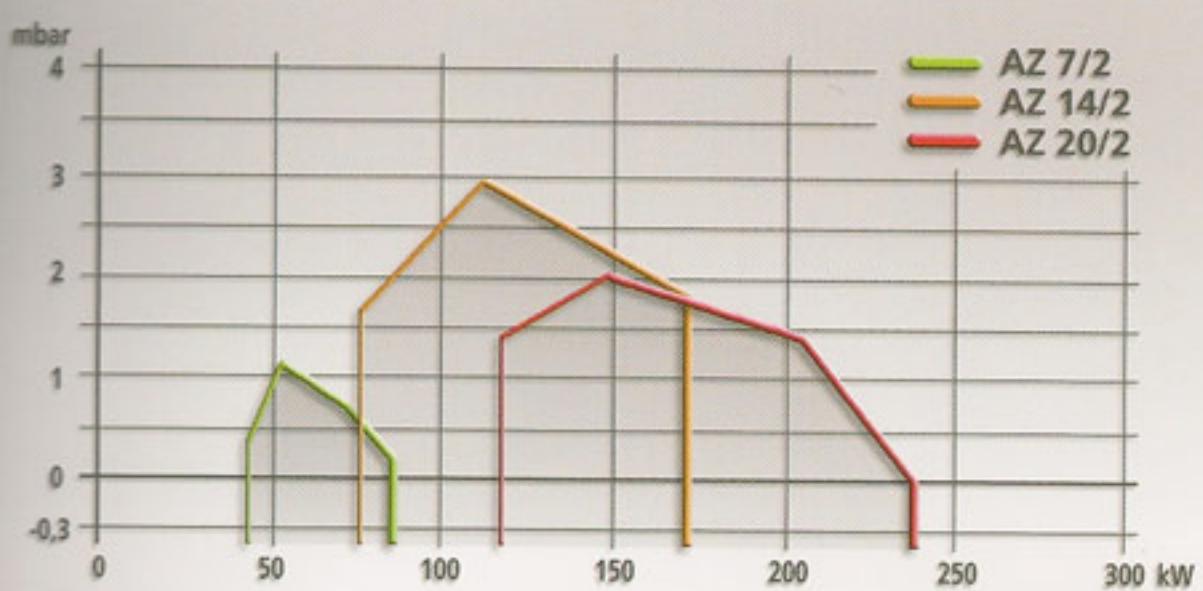

## TECHNICAL DATA

MODELS	AZ 2.9 PR	AZ 3 PR	AZ 4 PR
CAPACITY (min/max) kW	14,2 / 35,6	14,2 / 35,6	21,3 / 53,4
(min/max) kcal/h x 10 <sup>3</sup>	12,2 / 30,6	12,2 / 30,6	18,3 / 45,9
FUEL CONSUMPTION (min/max) kg/h	1,2 / 3	1,2 / 3	1,8 / 4,5
POWER SUPPLY	monoph. 230V - 50 Hz	monoph. 230V - 50 Hz	monoph. 230V - 50 Hz
MOTOR	W	100	100
NOZZLE	GPH	0,30 / 0,85	0,30 / 0,85
PUMP PRESSURE	bar	12	12
CONDENSER	µF	4	4
IGNITION TRANSFORMER	kV-mA	8-20	8-20
AIR SHUTTER		manual adjustment completely closed	manual adjustment completely closed
		manual adjustment completely closed	manual adjustment completely closed

## ENERGY SAVING

The air shutter automatically closes when the burner stops and this forbids cold air flow in the boiler. This means energy saving for the user.

## HIGH EFFICIENCY OF FAN

A new conception of scroll and conveyor profiles guarantees high pressure values of combustion air;

the burner is therefore fit for work on any kind of heat generator, even with semi-pressurised combustion chamber.

## EASY AND PRECISE ADJUSTMENT

of combustion, thanks to the particular structure of the combustion head and of the deflecting disk, adjustable by a tool even when the burner is working. This permits to optimise the combustion parameters in the most critical working conditions.

The easy access micrometric screw device permits a steady and precise air adjustment.

## FLAME STABILITY

The high fan prevalence, the air adjustment on the deflecting disk, the high blending speed permit a safe ignition and a stable burner working.

## COMBUSTION EFFICIENCY

The innovating features and the particular structure of the combustion head assure a high combustion efficiency at the start and during the working.

## ANTI-DRIPT DEVICE

The conformation of the hydraulic circuit permits the immediate and total fuel interception whenever the burner stops.

## EASY ACCESS

- the cover is removable to make the burner maintenance easier;
- the component cover can be removed in case of total overhaul;
- a hanging device permits to work easily on the burner.

## SECURITY AND EASY INSTALLATION

A universal flange permits to install the burner onto the boiler by only one screw. A self-protected, external multi pin plug allows easy and quick electrical connections; the plug disconnection permits to operate safely on the burner.

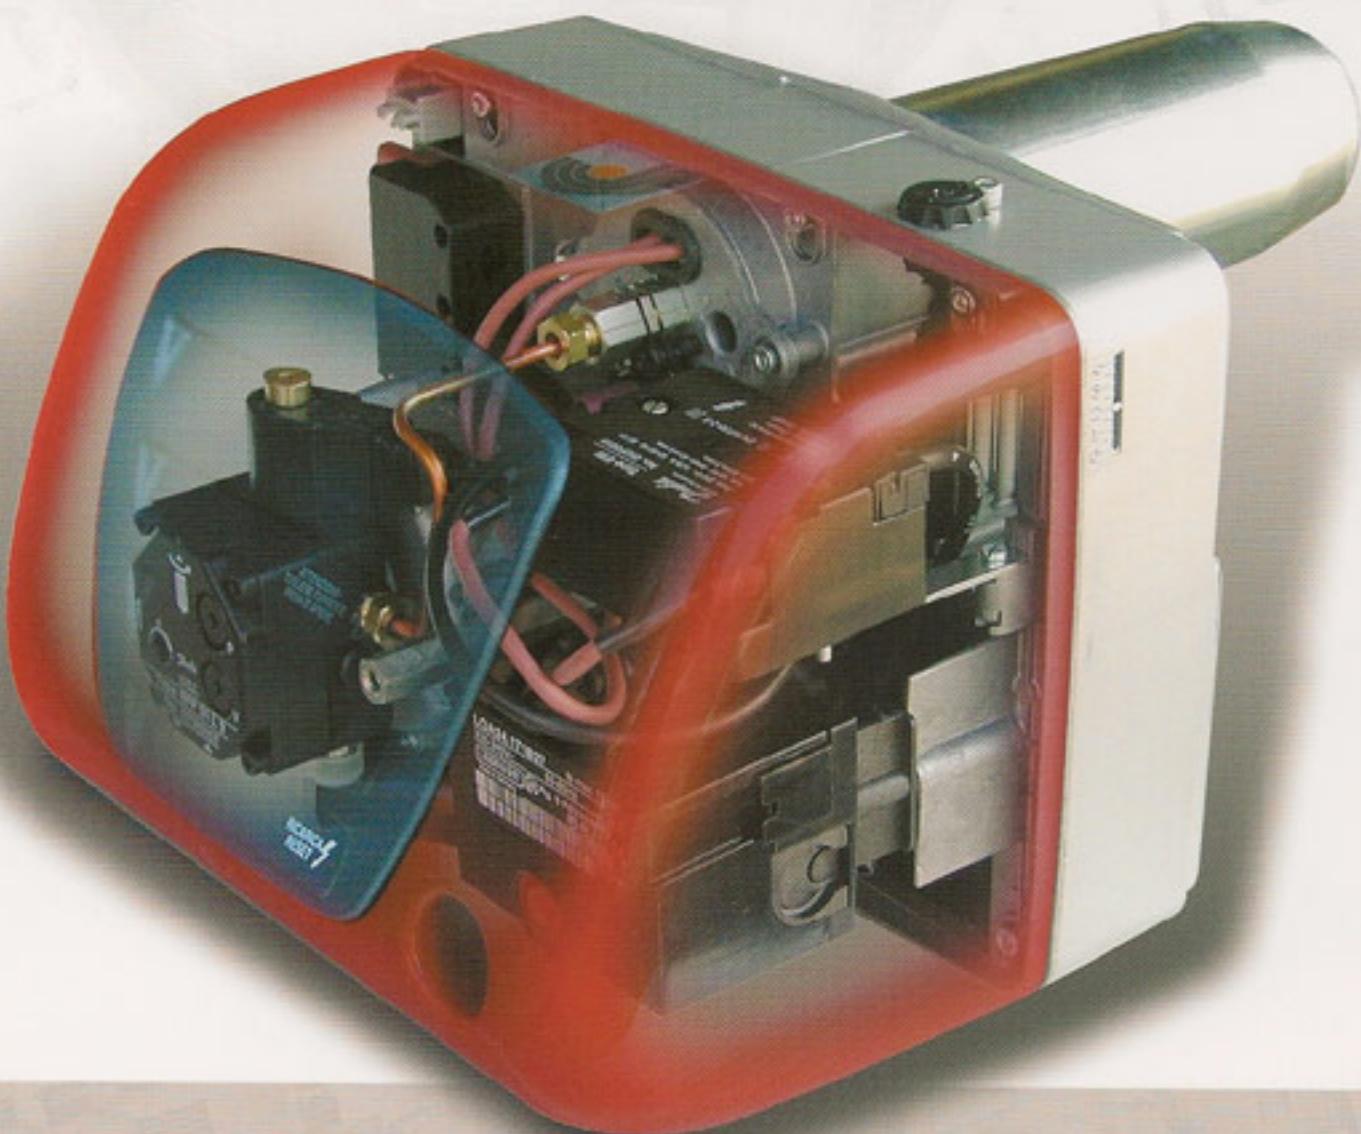

A locking device positions the fuel flexible pipes in the right seat, preserving them from any possible damage.

## LOW NOISE

The external air inlet makes the burner exceptionally noiseless even at peak working.

## RELIABILITY

The die cast aluminium body, the combustion head and the stainless steel deflecting disk, the components quality, the high manufacture standard, the severe production tests guarantee the burner high reliability.
